

HOW TO HANDLE THE WAX CAPPINGS:

THE DAKOTA GUNNESS UNCAPPERS have been used successfully with every kind of wax handling system: spinners, melters and skimming, without major changes in the honey house. More than likely, the uncapper can be adapted to your present system with few changes. The uncapper is no longer the "bottle neck" of the honey house. You can determine how many barrels a day you want to do, up to 60 barrels a day with one DAKOTA GUNNESS UNCAPPER.

IMPROVED FEATURES OF 200 MODEL:

The up and down positions of the flails may be quickly changed with hand nut turning while the machine is in use. This helps when combs are unevenly filled.

The uncapper is also equipped with 2 electric switches so that the flails can be stopped if the combs are relatively empty, while you run the combs through the conveyor to the extractor.

A new baffle helps to eliminate splatters.

TO ORDER:

Call 701-553-8393 or Fax 701-553-8394 to place your order. When your check is received, we will fill your orders, and ship your machine. Please allow 1-2 weeks lead time, if possible.

REMEMBER:

OUR BEST ADVERTISEMENT IS THE SATISFIED BEEKEEPERS WHO HAVE PURCHASED OUR DAKOTA GUNNESS UNCAPPER!

One of the largest beekeepers in the USA has run through many thousands of barrels of honey with our DAKOTA GUNNESS UNCAPPER. He is very pleased with his uncapping machine.

We encourage all inquiries about our **DAKOTA GUNNESS UNCAPPER**. Our machine is being patented, in the U.S., Canada, and other foreign countries. The response for our machine has been overwhelming.

We sincerely feel that this machine will pay for itself because of lack of broken combs, and savings in labor due to increased speed of the extracting process.

It is designed to work for every beekeeper with 200 colonies to 20,000 colonies of bees.

Also available with this uncapper are two sizes of conveyers, 5' and 8'.

If you run 2 extractors you may only need the one machine. If you run 3 or more extractors, we recommend either a 5' or 8' conveyor.

We have available a 15-minute video tape of our machine in use, for a deposit of \$15.00, which we will return, less postage, when tape is mailed back.

Here are some unsolicited comments from beekeepers who are using our **DAKOTA GUNNESS UNCAPPER:**

"...how happy we are with our machine. I really had a hard time justifying the price for only 300 colonies of bees. But it really was the best money I have ever spent on beekeeping."

Rich Suchan, Omaha, NE

"Don, your machine is very efficient and was a great help in our operation. A very excellent machine. We endorse it highly."

Darl B. Stoller, Latty, Ohio

"This is the best thing that ever happened to the beekeeping industry."

Charlie Parker, Beamsville, Ontario, Canada

"You made a believer out of me. We are consistently doing 50 barrels in a 9 hour day."

Dick Ruby, Milnor, ND

In Production Since 1987

Donald Gunness shown standing beside the Dakota Gunness Uncapper—200 Model

We are now celebrating the 24th year of building the **DAKOTA GUNNESS UNCAPPERS**, with satisfied customers all over the world. The Uncapper is equipped with 2 motors: one is a gear-reduction motor, and the other is a totally enclosed flail drive motor. Both are overrated for power needed, to ensure long life of the machine. They are both equipped with variable drives to achieve variable speeds in both the conveyer and in the flails. The end links of the chain flails are protected with pop rivets to lessen wear breakage.

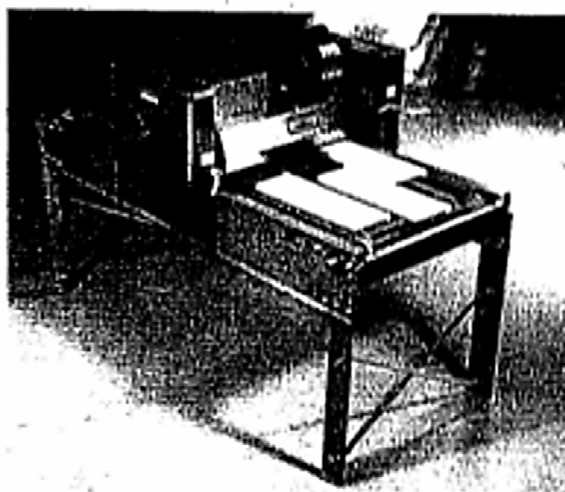

There are several minor adjustments that can be made on this machine. Complete instructions are included with each machine purchased. Once the machine has been set to your satisfaction, you will be able to fine-tune it with the new Quick Adjustment feature.

THE DAKOTA GUNNESS UNCAPPER®

The **DAKOTA GUNNESS UNCAPPER** is designed to completely remove the wax seal from the ends of the honeycomb cells. This is achieved by **HORIZONTALLY** placing the combs on a conveyer where they are fed rapidly through the **STAINLESS STEEL CHAIN FLAILS**, which removes the wax tip. These flails are located directly above and below the honeycomb as it is conveyed through the machine. They are then ready to be placed in an extractor.

The DAKOTA GUNNESS UNCAPPER Does Exactly What Every Beekeeper Wants:

1. Completely removes wax seal from ends of heavy comb cells.
2. Speeds up uncapping operation by being able to place 3 shallows or modifies, or 2 deep combs on the conveyer at the same time.
3. Because of the gentleness with which the flails remove wax tips, there is no damage to frames or combs.
4. Any width combs may be uncapped with slight adjustment, from the widest wooden frame to the narrowest plastic comb.
5. Because considerably more wax is left on the cell wall, less wax will be built, with more honey produced.

Measures 6 feet in length and is 30 inches wide, except in the flail drive area which is 39 inches wide and 25 inches high.
Weight: 350 lbs.
Crated weight: approx. 420 lbs.

Positive Features

1. Takes all sizes of frames and widths of combs.
2. Comb breakage eliminated.
3. Simple and easy to operate.
 - a. Waist high feeding
 - b. Needs no skilled labor to operate
4. Speed increased two to three times over other uncappers.
5. Less wax removed from comb.
6. Stainless steel construction.
7. Takes similar amount of floor space as other uncappers.
8. CAPACITY: 24 deep frames per minute or 36 shallow frames per minute.

Problems Eliminated

1. No adjustments needed for different sized combs.
2. No broken combs, no plugging or jamming.
3. No lifting combs to eye level, no slip clutches or reverse switches.
4. Ears on combs not necessary for uncapping.
5. The uncapper no longer limits the amount of honey extracted each day. Now, set your own pace.

Prices:

F.O.B. - Abercrombie, ND

Dakota Gunness Uncapper -

Model 200 with legs and crating.....\$6500

8 ft. conveyer with legs and crating.....\$2800

5 ft. conveyer with legs and crating.....\$2300

3.0% ND State Tax on machines picked up in ND.

Prices are subject to change. Paid in U.S. Dollars.

Shipping Charges:

Payment in full is required before machines are shipped out, unless other arrangements have been made. All over-seas orders must be paid in advance.

To insure prompt delivery, please try to order in advance of need. Machines will be shipped **FREIGHT COLLECT**, the cheapest method possible, either ground or air freight.
